Product Compliance Pack (BA SAMPLE)

Product: Contact Centre / CCaaS
Country: India

Sample pack (REF-IN-CC-001) for BA teams. Use this exact structure when converting research workbooks into Worktual Knowledge Layer source packs. Do not mix other countries or product spokes into this file.

Document ID	REF-IN-CC-001
Product	AI Contact Centre / CCaaS
Country / Region	India (IN)
Primary regimes	DPDP Act 2023 + Rules (as notified/commenced); TRAI TCCCPR 2018 and commercial communication controls; IT Act where applicable
Audience	BA, Legal/Compliance, Product, Compliance Engineering
Version	1.0 | 2026-09-01
Status	SAMPLE FOR BA PATTERNING - Legal review mandatory before activation
Replication rule	One pack = one Product x one Country (+ optional enterprise overlay)

BA instruction
Keep section order unchanged. Replace only India/Contact Centre content when cloning for other packs (example: REF-IN-CRM-001, REF-UK-CC-001). Every obligation needs ID, condition, severity, Worktual agent mapping, verification check, and primary source.

1. Purpose

This pack defines India Contact Centre obligations for Worktual agents and tools so rules are retrieved from the Compliance Knowledge Layer at runtime instead of being hardcoded in prompts.

- Separate TRAI communication rules from DPDP personal-data processing rules
- Map each obligation to Contact Centre agents and verification tools
- Provide ALLOW / REVIEW / BLOCK outcomes for runtime enforcement
- Serve as the BA template for all other Product x Country packs

2. Important India principle for Contact Centre

Two frameworks, two jobs
TRAI commercial-communication rules govern whether/how a call or SMS may be placed (registration, preference/DND, consent category, timing). DPDP governs processing of personal data created by the interaction (recording, transcript, identity, retention, purpose limitation, rights). Both may apply to the same call. Do not collapse them into one generic 'consent' row.

3. Authoritative sources (attach originals)

Source	Publisher	Use for	Reference
Digital Personal Data Protection Act, 2023	MeitY / India Code	Notice, consent, purpose, retention, rights, fiduciary duties	meity.gov.in / India Code
DPDP Rules (as notified / commenced)	MeitY	Operational notice/consent/security/retention detail	MeitY notifications
TCCCPR 2018 (+ amendments)	TRAI	Commercial calls/SMS, preference, headers/templates, UCC controls	trai.gov.in
DND / preference / scrubbing process	TRAI / TSP / DLT ecosystem	Outbound list scrubbing evidence	Operator/DLT process docs
Enterprise Contact Centre Policy	Tenant / Enterprise	IVR disclosure script, retention, auth, handoff SOP	Attach internal PDF

BA must record access date and commencement note. DPDP obligations should be tagged with effective/commencement status confirmed by Legal.

4. Scope - Contact Centre India

4.1 In scope

Channels	Inbound voice, outbound live/automated voice, SMS linked to CC journeys, webchat, email support, agent assist
Data	Identity, phone/email, recordings, transcripts, notes, dispositions, consent logs, DND scrub logs
Agents	Contact Centre Super Agent, AI Support, Agent Assist, Interaction Closure, Outbound/Audience
Actions	Answer, record, authenticate, handoff, suppress/opt-out, dial, disposition, store evidence

4.2 Out of scope (separate packs)

- Banking collections deep overlay (RBI FPC) - industry overlay pack
- Insurance advice / IRDAI deep overlay - industry overlay pack
- UK/EU Contact Centre packs - separate country packs
- Campaign email-only PECR-style packs for other countries

4.3 Applicability triggers

- Customer / data principal is in India
- Outbound campaign targets Indian telephone numbers
- Contact centre processing digital personal data under DPDP
- Commercial communication subject to TRAI preference/UCC framework

Do not apply India rules only because the agent language is English or Hindi.

5. Obligation inventory (required format)

Severity: Blocking = stop action; Approval = human gate; Guidance = instruct agent; Evidence = retain proof.

5.1 Recording, notice and DPDP processing

ID	Rule	When	Severity	Verify
IN-CC-REC-01	Provide clear notice of recording purpose before/at start of recording	Call recording on	Blocking	Disclosure played/logged with purpose code
IN-CC-REC-02	Capture purpose-specific consent/affirmation for recording where consent is the basis; do not bundle unrelated purposes	Recording / transcript processing	Blocking	Consent record: purpose, timestamp, channel, actor
IN-CC-REC-03	Do not reuse recording/transcript for a new purpose (e.g. model training/marketing) without valid basis and notice	Secondary use	Blocking	Purpose check on reuse tools
IN-CC-REC-04	Retain recordings only for stated purpose period; delete/anonymise when purpose ends (enterprise schedule)	Stored media	Blocking	Retention policy ID + deletion job evidence
IN-CC-REC-05	Support data principal rights workflows (access/correction/erasure as applicable) for interaction data	Rights request	Approval	Rights-request ticket + completion evidence

5.2 Outbound commercial communication (TRAI)

ID	Rule	When	Severity	Verify
IN-CC-TEL-01	Classify communication (service/transactional vs promotional) before dial/SMS	Outbound CC campaign	Blocking	Category field required
IN-CC-TEL-02	Scrub destination numbers against current DND/preference and enterprise suppression lists before promotional/commercial dial	Outbound promotional/commercial	Blocking	Scrub result PASS + timestamp
IN-CC-TEL-03	Do not place promotional calls/SMS without recorded prior consent/preference evidence	Promotional outreach	Blocking	Consent/preference reference present
IN-CC-TEL-04	Enforce permitted calling-hour window for commercial calls (enterprise may be stricter than 09:00-21:00 local)	Outbound commercial call	Blocking	Local-time window check
IN-CC-TEL-05	For SMS/content templates in commercial journeys, ensure required entity/header/template registration evidence exists	Commercial SMS linked to CC	Blocking	DLT/header/template IDs present
IN-CC-TEL-06	Honour opt-out / preference change immediately and propagate to linked channels	Opt-out received	Blocking	Suppression write + cross-channel sync
IN-CC-TEL-07	Log outbound attempt with category, consent/scrub refs, CLI/header, and outcome for audit	Any commercial outbound	Evidence	Audit record completeness check

5.3 Inbound service / AI Contact Centre operations

ID	Rule	When	Severity	Verify
IN-CC-SVC-01	Use customer data only for stated service purpose	Support interaction	Blocking	Purpose tag on tools
IN-CC-SVC-02	Authenticate before disclosing account-sensitive information	Sensitive enquiry	Blocking	Auth step completed
IN-CC-SVC-03	On explicit live-agent request, hand off and stop bot deflection loops	Human requested	Blocking	Handoff tool called
IN-CC-SVC-04	Disclose AI nature at interaction start where enterprise/policy requires, and whenever asked	Bot/voice AI interaction	Mixed	AI-disclosure event logged
IN-CC-SVC-05	Mask payment secrets (OTP/PIN/CVV) and pause recording where PCI/enterprise policy requires	Payment capture on call	Blocking	Pause/mask control active
IN-CC-SVC-06	Do not make regulated decisions autonomously (credit decline, KYC determination, claims adjudication)	High-risk request	Blocking	Decision-type classifier + human route

5.4 Evidence and audit

ID	Rule	When	Severity	Verify
IN-CC-AUD-01	Retain scrub, consent, disclosure, auth, approval, and opt-out evidence for high-risk actions	High-risk actions	Blocking	Evidence IDs in decision log

ID	Rule	When	Severity	Verify
IN-CC-AUD-02	Store policy-pack version used at decision time	Any compliance decision	Blocking	decision.policySetVersion present

6. Mapping to Worktual Contact Centre agents

Agent / capability	Must load	Typical tools
Contact Centre Super Agent	All applicable IN-CC-* for action	Policy resolve, decision token
AI Support Agent	REC-01..03, SVC-01..04	Disclosure, purpose, auth, handoff
Agent Assist / Coworker	SVC-02, SVC-05	Auth gate, PCI mask/pause
Interaction Closure	SVC-06, TEL-06	Disposition confirm, suppress
Audience / Outbound Campaign	TEL-01..07, AUD-*	Category, DND scrub, consent, window, DLT
Recording / QA workflows	REC-01..05, AUD-*	Notice, consent, retention, rights

7. Runtime decision model

- 1. Resolve packs: country=IN + product=contact_centre + enterprise overlay
- 2. Return only task-relevant obligations
- 3. Agent prepares action using guidance
- 4. Verification tools evaluate Blocking/Approval checks
- 5. Outcome: Allow / Approve / Block
- 6. Write audit evidence with policy version

7.1 Example A - India promotional outbound call

Campaign classifies call as promotional -> scrub DND/preference + enterprise DNC -> validate prior consent -> enforce calling-hour window -> dial with compliant identity -> if customer opts out, suppress across channels -> store scrub/consent/outcome evidence.

7.2 Example B - India inbound recorded support call

Recording enabled -> purpose notice played -> consent/affirmation captured if required -> AI Support serves with purpose limitation -> sensitive disclosure requires auth -> payment capture pauses recording/masks secrets -> live-agent request triggers handoff -> retention schedule applied to recording/transcript.

8. Standard verification outcomes

Failed check	System outcome
Promotional dial without scrub PASS	Block outbound call
Promotional dial without consent/preference evidence	Block
Outside permitted calling hours	Block or schedule later
Recording on without purpose disclosure	Block recording start or require approval
Secondary use of transcript without basis	Block
Opt-out present	Block and suppress
Sensitive disclosure without authentication	Block
Missing evidence for high-risk action	Block

9. Open questions for Legal/Compliance

- Which DPDP Act/Rules provisions are in force for this tenant go-live date?
- Is recording based on consent, legitimate use, or contract for service calls?
- Exact IVR disclosure wording and language variants (EN/HI/others)?
- Enterprise calling-hour window and frequency caps?
- Which commercial categories require DLT header/template evidence in this deployment?
- Retention periods for recordings, transcripts, AI summaries, scrub logs?
- Are BFSI/insurance overlays required for this tenant?

10. Attachment checklist

- [ ] DPDP Act text / Legal summary with commencement notes
- [ ] DPDP Rules notification (as applicable) with access date

- [ ] TRAI TCCCPR 2018 (+ amendments) extract
- [ ] DND/preference scrub SOP + sample evidence
- [ ] DLT/entity/header/template registration evidence (if SMS in scope)
- [ ] Enterprise Contact Centre Privacy / Recording Policy
- [ ] Sample IVR disclosure + opt-out scripts
- [ ] Retention and deletion SOP

11. Handoff to Compliance Knowledge Layer

After Legal approval, Compliance Engineering converts each obligation into:

- Structured metadata (country=IN, product=contact_centre)
- Machine-evaluable controls
- Agent/tool mappings
- Verification checks
- Citations to this pack and official sources
- Versioned publication with auditability

Activation rule
Until Legal marks this pack Approved, Worktual agents must not treat these obligations as live policy.

12. What BA must change vs the previous mega workbook

- Split into Product x Country packs (this format), not one all-country PDF
- Remove non-India laws from India sections (no TCPA/HIPAA/CCPA leakage)
- Add stable obligation IDs and verification checks
- Map every Blocking rule to a Worktual agent/tool
- Attach primary sources with access dates
- Add Legal approval block and enterprise overlay pack

Document control: REF-IN-CC-001 v1.0 | Worktual Product Compliance Pack (BA Sample) | Not legal advice. Confirm commencement and interpretation with Legal before production use.
