Proposal Submitted to Nvidia

for

(AI Native Ticketing System)

Aug 3, 2026

SOLUTION

AI Native Ticketing System

Per-user license with ticket packs

Introduction

Worktual Innovations Pvt Ltd is pleased to submit this proposal for nvidia.

We understand that nvidia requires a modern, AI-driven ticketing platform that can handle high-volume, multi-channel support interactions while providing full visibility and control to support teams. Our AI Native Ticketing System delivers exactly that – an omnichannel, conversational ticketing solution built on role-based access, AI-powered routing and automated lifecycle management.

The solution is offered on a per-user subscription model, enabling nvidia to scale the platform in line with its growing support organization and ticket volume.

Key Product Features

- Omnichannel Integration – Consolidates tickets from email, SMS, voice calls, web chat, WhatsApp, Facebook and Instagram under a single Ticket ID.
- Conversational UI – All ticket actions (create, update, assign, resolve) are performed through natural-language chat interfaces for agents and customers.
- AI-Driven Ticket Assignment – The routing engine analyses subject, description, sentiment and priority to auto-assign tickets to the most suitable resolver. Confidence levels trigger automatic assignment, suggested lists or manual routing.
- Role-Based Access Control – Four predefined roles (Admin, Ticketing Agent, Resolver, Customer) with granular permissions for configuration, ticket handling and reporting.
- Full Ticket Lifecycle Management – Automated stages from creation, SLA tracking, resolution, closure, and reopen if the issue recurs, with audit trails for every action.
- SLA & KPI Monitoring – Real-time dashboards display SLA compliance, average resolution time, and agent performance metrics.
- Analytics & Reporting – Built-in reports on ticket volume, channel distribution, root-cause analysis and trend insights.
- Scalable Ticket Packs – Base license includes 2,000 tickets per month; additional packs can be purchased in increments of 500, 1,000 or 5,000 tickets.
- Self-Service Customer Portal – Customers can create, track, comment on and reopen their own tickets via a web portal or chat channel.
- Knowledge Base Integration – Centralized knowledge articles can be suggested automatically during ticket handling to accelerate resolution.
- Multi-Language Support – Platform ready for additional language packs (out-of-scope unless requested).

Scope of Work

The following capabilities are included in the scope of this engagement:

- Per-user subscription (₹15,000 / user / month) inclusive of 2,000 tickets per month.
- Role-based configuration for Admin, Ticketing Agent, Resolver and Customer.
- Omnichannel connectors for Email, SMS, Voice (PSTN), Web Chat, WhatsApp, Facebook and Instagram.
- Conversational onboarding and AI model training for ticket classification and routing.
- SLA rule definition, escalation matrix and KPI dashboard setup.
- Knowledge-base import and linking to ticket flow.
- Initial set of 2,000 tickets per month; additional ticket packs can be ordered as needed.
- Implementation services: requirements gathering, platform provisioning, channel integration, user onboarding and UAT support.

Out-of-Scope

- Custom language packs beyond English.

- Integration with third-party ITSM tools not listed above.
- On-premise deployment (solution is SaaS only).
- Ongoing custom development after Go-Live; such work will be scoped and priced separately.

A detailed list of use cases and configuration parameters will be captured during the kickoff workshop and documented as part of the onboarding deliverables.

Plan of Action

S.No	Activity	Responsibility	Start Date	End Date
1	Kick-off Workshop	Worktual	10-Oct-26	10-Oct-26
2	Requirements & Channel Inventory	Worktual / nvidia	11-Oct-26	14-Oct-26
3	Platform Provisioning & User Role Setup	Worktual	15-Oct-26	18-Oct-26
4	Omnichannel Connector Configuration (Email, SMS, Voice, WhatsApp, FB, IG)	Worktual	19-Oct-26	25-Oct-26
5	AI Routing Model Training & Validation	Worktual	26-Oct-26	02-Nov-26
6	SLA & KPI Dashboard Configuration	Worktual	03-Nov-26	07-Nov-26
7	Knowledge Base Import & Linking	Worktual / nvidia	08-Nov-26	12-Nov-26
8	User Acceptance Testing (UAT)	nvidia	13-Nov-26	17-Nov-26
9	UAT Feedback & Refinement	Worktual	18-Nov-26	20-Nov-26
10	Go-Live & Post-Launch Support	Worktual / nvidia	21-Nov-26	21-Nov-26

All dates are indicative and will be refined during the kickoff workshop.

Commercials

Pricing

- Subscription License: ₹15,000 per user per month (includes 2,000 tickets).
- Additional Ticket Packs (optional):
- 500 tickets – ₹2,500 per month
- 1,000 tickets – ₹4,800 per month
- 5,000 tickets – ₹22,000 per month

- Implementation Services: One-time fee of ₹120,000 covering configuration, channel integration and AI model training.

All prices are exclusive of applicable GST and are quoted in Indian Rupees.

Terms and Conditions

1. Validity – Prices are valid for 15 days from the proposal date.
2. Payment Schedule

- 50 % of the implementation fee payable on receipt of Purchase Order.
- Remaining 50 % payable upon successful UAT sign-off.
- Subscription fees invoiced monthly in advance; first month due prior to Go-Live.

1. Ticket Pack Adjustments – Additional packs can be added or reduced on a monthly basis with a 5-day notice.
2. Scope Changes – Any out-of-scope work (custom integrations, extra language packs, on-premise hosting) will be scoped separately and billed on a time-and-materials basis.
3. Service Level – Standard SaaS SLA of 99.5 % uptime; premium support options available on request.
4. Late Payment – Payments overdue by more than 15 days may result in temporary suspension of the service until arrears are cleared.

All commercial terms are subject to the standard Worktual Master Services Agreement.

Onboarding Process

S.No	Activity Description	Responsibility
1	Creation of AI Native Ticketing System tenant	Worktual
2	Definition of user roles (Admin, Agent, Resolver, Customer) and permission matrix	Worktual / nvidia
3	Collection of channel credentials (email servers, SMS gateway, VoIP, WhatsApp Business API, Facebook & Instagram pages)	nvidia
4	Configuration of omnichannel connectors and test of inbound/outbound flows	Worktual
5	Upload of initial knowledge-base articles and FAQ set	nvidia
6	Training of AI routing model using sample tickets provided by nvidia	Worktual
7	SLA rule setup and KPI dashboard configuration	Worktual
8	User Acceptance Testing (UAT) – agents and resolvers validate end-to-end ticket flow	nvidia
9	Incorporation of UAT feedback and final refinements	Worktual

S.No	Activity Description	Responsibility
10	Go-Live sign-off and handover of operational documentation	Worktual / nvidia

Onboarding activities commence after receipt of the implementation fee and are expected to be completed within 6 weeks.

Implementation Plan

A detailed implementation roadmap, including milestones, resource allocation and risk mitigation measures, will be presented during the kickoff workshop. The plan outlines configuration steps, channel integrations, AI model training, UAT cycles and the final Go-Live schedule.

Support

Worktual provides 24 × 7 technical support under a 2-4-7 model (2 hours initial response, 4 hours resolution for critical issues, 7 days for non-critical). A dedicated account manager will serve as the single point of contact for all operational and escalation matters throughout the subscription term. Support includes issue triage, performance tuning of the AI routing engine, and quarterly health-check reviews.

Conclusion

Worktual is committed to delivering a robust, AI-driven ticketing platform that will enable nvidia to streamline support operations, improve first-contact resolution and gain actionable insights across all customer communication channels. We look forward to partnering with nvidia on this strategic initiative and driving measurable value for your support organization.
